#### SURAT KETERANGAN BEBAS PLAGIASI

No: B-2652/In.38/FT.3/PP.00.9/06/2021

Ketua Program Studi Tadris Bahasa Inggris menerangkan bahwa karya ilmiah berikut:

Judul : The Effect of Audiovisual Media on The Students' Listening Skill at  
Second Semester of English Department IAIN Madura in Academic  
Year 2020/2021.  
Penulis : Damayanti Apriliani  
NIM/NIP/NIDN : 20170701032031  
Prodi : Tadris Bahasa Inggris

Setelah dilakukan deteksi plagiasi pada tanggal 03 Juni 2021, maka ditemukan tingkat plagiasinya sebesar 16%, sehingga dinyatakan **Layak** untuk dipergunakan untuk mengikuti ujian skripsi.

Demikian surat keterangan ini dibuat dengan sebenarnya untuk dipergunakan sebagaimana mestinya.

Pamekasan, 07 Juni 2021

*Answer the following questions based on the audio/video that you have listened/viewed. Give a color (red) for the correct answer!*

1. What does the spoken text tell us about?
  - a. Koalas
  - b. Bears
  - c. Pandas
  - d. Kangaroos
  
2. How do koalas carry their babies?
  - a. With their wrist
  - b. With their feet
  - c. In their pouches
  - d. In their mouths
  
3. What is the purpose of the spoken text?
  - a. To advertise something
  - b. To describe about something
  - c. To tell past events
  - d. To tell how something is done
  
4. How long do baby koalas stay in the pouch?
  - a. 12 months
  - b. 9 months
  - c. 6 months
  - d. 3 months
  
5. Which of the following statement is true about koalas?
  - a. Koalas have big tails.
  - b. Koalas have long legs.
  - c. Koalas are big animals.
  - d. Koalas eat eucalyptus.

6. How do koalas keep their babies?
  - a. Around their stomachs.
  - b. Behind their bodies.
  - c. In their pouches.
  - d. On their shoulders.
  
7. What kind of thing is being talked about?
  - a. Animal
  - b. Fruit
  - c. Plant
  - d. Vegetable
  
8. How are koalas' eyes when they are born?
  - a. They are big.
  - b. They are wide.
  - c. They are open.
  - d. They are closed.
  
9. Where are koalas famous from?
  - a. America.
  - b. Australia.
  - c. England.
  - d. Indonesia.
  
10. What is the best title for the spoken text?
  - a. Koalas are small
  - b. Koalas are bears
  - c. The life of koalas
  - d. Where koalas live

## **APPENDIXES**

### **The text for Pre-test**

Although you may have heard them called koala. Koalas are not bears at all! Like bears, koalas are mammals, which means they are warm-blooded, have fur, and feed their babies milk. Unlike bears, koalas are a special kind of mammal called 'marsupials.' Marsupials have pouches to carry their babies in for a few months after they are born. Kangaroos are probably the most famous marsupials but koalas have pouches too! Baby koalas are called joeys. When they are born, they are only about the size of a jellybean. They have no fur and their eyes and ears are closed. Koala joeys will stay in their mothers' pouches for about six months. Once a baby koala comes out of the pouch, it will hang onto its mother's back or stomach and stay with her for another six months. Full grown koalas reach lengths of 24 to 33 inches or 60 to 85 cm, and weights of up to 33 lbs or 15 kg, although the females are usually much smaller. Koalas are native to eastern Australia, where the eucalyptus forests they call their home grow. They are herbivores and eat almost exclusively eucalyptus leaves. Although there are about 600 types of eucalyptus trees in Australia, koalas will only eat about 120 of them, and an individual koala will only eat leaves from about 4 to 6 types. Eucalyptus trees are both food and a home for koalas. Koalas have short, curved claws, ideal for climbing trees, and two thumbs on their front paws that help them to grip small branches. They rarely even come to the ground to drink: the name 'koala' is from an Aboriginal word meaning 'no drink,' because koalas get most of their water from the leaves they eat. Koalas spend almost all of their time in the treetops, eating, or more likely, sleeping. Koalas usually sleep between 18 and 22 hours a day - it takes a lot of energy to digest eucalyptus leaves. Eucalyptus leaves are poisonous to most animals, but koalas have an extra-long digestive system that allows them to break down the leaves without being hurt by the poison. Although koalas are not currently endangered, they are in trouble. Once they were hunted in large numbers for their soft fur. Although they are protected now, they need plenty of eucalyptus trees - about 100 trees per koala - to have enough food to eat. As the forests they live in are cut down by humans, koalas have fewer and fewer places to live. If we want to make sure that koalas stay healthy and happy, we need to protect their habitats so they have enough trees to call home.

### Questions for Post-test

Name :	Score
NIM :	

*Answer the following questions based on the audio that you have listened. Give a color (red) for the correct answer!*

1. What does the spoken text tell us about?
  - a. Cats
  - b. Elephants
  - c. Hamsters
  - d. Pandas
  
2. Which of the following statement is false according to the spoken text you heard?
  - a. Elephants have big ears.
  - b. Elephants are herbivores.
  - c. Elephants are mammals.
  - d. Elephants eat other animals.
  
3. What do elephants not eat?
  - a. Cats
  - b. Fruits
  - c. Grass
  - d. Roots
  
4. What is the purpose of the spoken text?
  - a. To advertise something.
  - b. To describe about something.
  - c. To tell how something is done.
  - d. To tell past events.
  
5. What is the best title for the spoken text?
  - a. How elephants drink
  - b. The life of elephants
  - c. What elephants eat
  - d. Where elephants live

6. How are African elephants' ears?
- a. Big
  - b. Long
  - c. Small
  - d. Tiny
7. How long is an elephant's trunk?
- a. 2 meters
  - b. 3 meters
  - c. 4 meters
  - d. 5 meters
8. What are the main types of elephants?
- a. American elephants and African elephants
  - b. Asian elephants and African elephants
  - c. Asian elephants and Australian elephants
  - d. European elephants and African elephants
9. What kind of elephant has tusks ?
- a. African
  - b. American
  - c. Asian
  - d. Australian
10. What kind of thing is being talked about?
- a. Animal
  - b. Fruit
  - c. Plant
  - d. Vegetable

## **APPENDIXES**

### **The text for Post test**

Elephants are the largest living land animals. Although giraffes are taller than elephants, elephants are much, much heavier. The largest elephant ever recorded was an African elephant that weighed 27,000 lbs or 13.5 tons and measured more than 13 and a half feet or 4.1 meters tall. Elephants are mammals. They may not look very furry, but like all mammals, elephants grow at least a little hair, they are warm-blooded, and they feed their babies milk. Elephants are herbivores, eating leaves, fruit, twigs, bark, grass, and roots. They can consume up to 500 lbs or 225 kg of vegetation per day. Because of this, elephants spend almost all day eating. Aside from their massive size, elephants are easy to identify because of their large, flat ears and their long, flexible trunks. The trunk, which is actually a long nose which can reach lengths of up to 7 feet or two meters-is a specialized organ, unique to elephants. Trunks are strong - elephants can easily lift loads of about 550 lbs or 250 kg with them- but they are also very flexible and can perform delicate actions. An elephant can even pick up a coin from a flat surface using its trunk. Elephants can also suck water up into their trunk, but they do not drink it there. Once they have filled their trunks with water, elephants will spray it into their mouths to drink, or spray it onto their bodies to cool themselves. A thirsty elephant may drink up to 50 gallons or 200 liters of water in one day, which is enough to fill a bathtub. There are two main types of elephants, Asian elephants and African elephants. The Asian elephant is native to southeast Asia, and is the smaller of the two species. They can be recognized by their smaller ears and by the fact that the females and even some males do not have tusks. Asian elephants live in grasslands, forests, and scrublands. The African elephant is the larger of the two species, and can be recognized by its oversized ears and prominent tusks on both males and females. They can be found distributed through most of Africa, in forests, woodlands, scrub, or desert. Elephants are endangered, and there are a few different reasons why. First, elephants are often hunted for their ivory tusks which can be sold around the world, as well as for their meat and skins. Although there are now laws in place to stop elephants being killed for their tusks, many elephants every year are still killed by illegal hunters, or poachers. Elephants can also be killed if they come too close to human settlements,

damaging fences, crops, or buildings. Finally, elephants are at risk because their habitats are being destroyed. Because they are so large, elephants need vast expanses of land to live and find food in. As humans expand their cities and farmland, elephants have fewer and fewer places to live. People are working hard to save elephants. Laws that banned the sale of ivory helped to save many elephants, and people are trying hard to learn how to live peacefully with these giant mammals. I hope you enjoyed learning about elephants today.

All About Owl for Kids: Backyard Bird Series

Owls: mysterious nocturnal hunters, these unusual birds have captured our imaginations for centuries. However, even though they hunt almost exclusively in darkness, owls are nothing to be afraid of. There are more than 200 species of owls around the world, and these versatile birds of prey make their homes on every continent except Antarctica. Although there are differences between species, owls share some key features. Owls have sharp talons, hooked bills, and heads that can swivel around in almost any direction. Something interesting about owls is that they cannot move their eyes. If owls want to look at something that is not straight ahead of them, they have to turn their whole head. Owls also have soft plumage. It is these soft feathers that give owls their greatest advantage as a hunter: silent flight. Most birds flap noisily when they fly. Owls' feathers have special edges and a velvety soft covering that absorb sound and let owls fly so quietly that their prey never hears them coming. Owls typically swallow their prey whole and then regurgitate a pellet of anything too tough to be digested, like fur, bones, and claws. Dissecting these pellets is a good way to find out what the owl has been eating. Owls are good parents, too. They stay with their nestlings and bring them food to eat- meat, of course. The parents will rip the meat up into small enough pieces that their babies can eat it. The parents will care for the young until they are fully feathered and ready to fly off on their own - a process which takes anywhere from a few weeks to a few months, depending on the species of owl. Finally, you are probably familiar with one kind of owl call: the hoot. But owls make an interesting variety of noises.

#### Top 7 Animals that Kill Warthogs

Welcome to animal channel in today's episode we will count down the top seven animals that kill warthogs warthogs are formidable and dangerous animal but unfortunately for the Warthog there are plenty of animals that would like nothing more than a fresh meal of pork here are the top seven animals that kill warthogs number seven crocodile weighing up to a ton and with a bite force of 3,700 pounds per square inch the warthog is no match for the crocodile. Six wild dogs wild dogs are not the biggest or the strongest animal but they do have high endurance and hunting as a pack makes them a very successful hunter in fact wild dogs have over eighty percent successful kill rate. Five cheetah the cheetah is the fastest land mammal in the world capable of reaching speeds of over seventy miles per hour it normally prefers hunting Thompson gazelle but occasionally it will prey on a midsize Warren for martial Eagle. The marshal eagle is the largest eagle in Africa it is extremely strong and powerful capable of killing and eating prey twice its size. Unfortunately this little piggy didn't make it home three tiger weighing up to 600 pounds the tiger is an apex predator in Asia it is no match for the warthog in fact Tigers are so powerful they can kill a warthog with a single swipe of the paw two lions being that lions live in large packs they have many mouths to feed therefore Lions prefer hunting big game such as buffalo zebra and giraffe but occasionally Simba will take out boomba. Number one leopard with extreme agility and power the leopard kills more warthogs than any other animal in the world making it the ultimate warthog killing machine.

#### Lions

You may already know that lions are big cats weighing up to 500 pounds and growing up to 10 feet long. Lions are the second largest members of the cat family after tigers but here are some things you probably didn't know about them. Lions have significant norms a lion's roar may be heard up to five miles away and can be nearly as loud as thunder. Lions begin to vocalize as soon as they are born but their vocalizations don't start to develop into roars until the lions are about one-year-old roaring allows. Lions to claim their territory by communicating their presence to potential intruders. It also helps them communicate with fellow lions within their pride. Lions are the only cats that regularly live in social groups called prides these groups are family units that include as few as three and as many as forty lions. They typically have one dominant male, but may sometimes have two to three leading males at a time. The rest of the prides adult members are females and they are often related to each other they givebirth around the same time which allows their cubs to nurse from multiple females. Lions are not the most successful hunters but they do consume a lot of meat lionesses who are the primary hunters of a pride only succeed in making a kill less than 30% of the time. Their prey such as zebras and antelope are usually faster and larger than the lionesses but by working together the females increase their chances of exhausting their prey and killing. It despite their unsuccessful attempts to catch prey lions may still consume about 20 pounds of meat a day and some are capable of devouring nearly 100 pounds a day not all male lions have mane's. The male lions of tsavo kenya are mysteriously man less speculation as tothe explanation ranges the lions may have higher testosterone levels or thelack of mane may be an adaptation forkeeping cool in the heat when the lionsdo have mane's the hair usually serves to intimidate other males or impress females similar to a male peacock and his feathers .one study in the serengeti showed thatfemales preferred full dark mane's as they may signal fitness and ability to fight. Lions were once scattered worldwide around 124 thousand years ago several subspecies of lions existed throughout the planet. This included the cave lions of europeand the american lions of north america unfortunately both became extinct by about 8000 bc the

surviving subspecies. The african lions of sub-saharan africa and the asiatic lions of india have declined due to poaching habitat loss and disease an estimated 20,000 african lions. Remain in the wild and they are classified as vulnerable asia lions are listed as endangered with a population of only about 500 lions are some of the most formidable creatures on the planet. Their impressive size and appetite strong social cohesion and regal appearance make it clear why they are considered the king of beasts

Please describe your pet 😊

I have a rabbit. My rabbit has dense fur and has a brown color. Her eyes were brown like honey. Her eyes were clear and soothing to look at. Her tiny pink lips are just adorable. Her ears are long and wave when she runs. My rabbit is very spoiled. Before I stroked her she always bother me. When it was time to eat she circled in front of me while wagging it has long ears. Her mouth twitched as if someone was praying. Her spoiled make me always miss.

Because nobody asked, then I'll just give the task 08.38 ✓✓

The task is still same as last week. You can watch the video that I gave and then you give the conclusion of the video.

Dead line on Sundays.
